## VAMPIRE BEAUTY

Anti-aging medicine is about health, energy, and beauty maintenance and restoration utilizing the latest developments in science, medicine, and nature.

Maintaining health and energy can be accomplished by a combination of interventions, which include supplements, antioxidants, lifestyle modification, exercise, weight management, and hormones when indicated

Maintaining beauty and a youthful look may be obtained with cosmetic Botox injection, dermal fillers, skin rejuvenation with platelet-rich plasma injection, micro-needling technique, and others.

In this article I will highlight the platelet-rich plasma therapy for skin rejuvenation, also known as the vampire filler or vampire facelift. It is a process in cosmetic surgery where platelets are extracted from the patient's own blood and used as a dermal filler.

It is a new technology where your own blood cells will be utilized successfully to attract stem cells for speeding tissue repair and wrinkle reduction to provide a more youthful appearance.

Platelet-rich plasma will rejuvenate the skin by improving the skin texture and erasing lines gradually. When used in age-damaged areas in the face, neck and hands, the tissue will improve to a healthier and younger condition.

This treatment may help individuals who are using cosmetics for lines and wrinkles in the face, neck, and hands, who want to take their skin care to a higher level.

Individuals who have allergies to cosmetic products may tolerate PRP because of the fact that they are using purely their own cells.

For skin improvement, platelet-rich plasma is injected over three sessions, usually spaced a month apart.

Early improvement may show as early as one week; however, it is a gradual process with changes showing over three to six months. The effect of PRP may last up to two years. All age categories will benefit from PRP.

Side effects are very minimal and may include redness and mild bruising. Allergic reactions may not happen since PRP is your own blood.

Platelet-rich plasma has been used in anti-aging medicine for non-surgical hair restoration as well.

The RPR is injected into multiple sites in the patient's scalp. PRP is rich in hair follicle stimulating cells that can stimulate new hair growth. This procedure may be performed every six months.

When compared to other surgical treatment options, the treatment has proven to be effective and very affordable and cost effective. For more information visit <https://www.prime-journal.com/platelet-rich-plasma-a-therapy-for-hair-growth> Our providers at VIP anti-aging center are anti-aging and skin rejuvenation specialists with further certification in Botox injection, dermal fillers and PRP injections, micro-needling/ dermapen technology, hormone replacement therapy, weight management, and HCG treatments.

Say good-bye to the aged, angry, and stressed look. VIP Anti-aging Center can offer you a less invasive approach to a more beautiful and younger you.
